

Autoworkonline

GENERATE MORE REVENUE BY RECOVERING DEFERRED WORK

Deferred work is a feature in Autowork Online that helps garages manage postponed jobs. Rather than deleting work that motorists decline, the software enables garages to defer the jobs until a later date and send reminders to their customers.

"We use deferred work alongside the CarSide app and day-to-day advisories. It allows us to estimate for specific work and then either implement the work on an existing job card, create a new job to be allocated, or to set up a reminder for us to contact the customer in the future to secure the work. This has been used to great success and has increased profit."
