

# Autocat

Web-driven  
auto parts catalog

Autocat is an innovative electronic parts catalog that enables suppliers to effectively present their products to all levels of aftermarket distribution.

## Key features

- ▶ Cloud technology driven
- ▶ Simplified searches aid part identification
- ▶ Product details including images, attributes, and interchanges
- ▶ Published changes are quickly available to all users
- ▶ Available to Mfgs, WDs, Jobbers and Service Dealers
- ▶ Continuous product data release process
- ▶ Utilizes ACES and PIES load and update delivery specifications
- ▶ Integrates with MAM solutions:
  - ▶ Autopart (WD management software)
  - ▶ VAST (shop management software)
  - ▶ OpenWebs (E-Commerce software)

Autocat provides direct access to the latest updates from a wide variety of industry suppliers. Utilizing cloud technology and ACES and PIES standards, Autocat publishes updates quickly and eliminates monthly data distribution. Supplier files are validated and published to a cloud-based database, where information is immediately available to all Autocat customers.

Autocat contains a user-friendly interface with intuitive selection of vehicle information and product types on a single screen. Additionally, the product category and sub-categories are configurable, allowing customers to place part types in logical areas to increase visibility and related sale opportunities. VIN, Interchange, and Buyers Guide searches provide multiple methods to identify the right part and increase sales.

Year	Make	Model
15	08. Ford	19. Mustang
18	17. Acura	11. F-450 Super Duty
17	75. Aston Martin	12. F-550 Super Duty
116	19. Audi	13. F650

## Catalog Data Management

### Real-time data

Autocat users do not have to wait for monthly media-based updates to gain access to new information. In contrast to traditional electronic catalogs, Autocat uses cloud technology to store supplier catalog information. Web service calls then retrieve that information, providing real-time access to live data.

### Partnering with suppliers

MAM's Autocat catalog provides Automotive Aftermarket suppliers with an effective way to get their new products and catalog updates to the marketplace quickly.

Taking advantage of the ACES and PIES industry standards, Autocat receives, processes, and publishes updates often less than 48 hours. The published updates are immediately available to all Autocat users, ensuring searches provide the latest information.

MAM presents data as intended and does not modify supplier information.

### Distributor advantage

Parts distributors can use powerful and convenient options built into the Autocat search and results display. For example, users can configure Parts Categories and Subcategories to display meaningful descriptions, or place them in a preferred order so popular products are easily accessible. Results can also be configured to sort primary suppliers in preferred order.

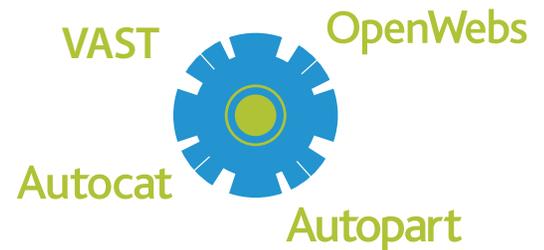

### Catalog innovation

Electronic catalogs have been used with the Automotive Aftermarket for almost 30 years. Although such catalogs have helped standardize searches and information, the distribution of updates has lagged behind technology and the pace of business transactions.

Autocat takes cataloging to the next level, providing updates at web speed without monthly maintenance. Whether partnered with MAM's point-of-sale or B2B eCommerce solution, Autocat offers consistent, up-to-date results to make the sale every time.
