

WMS

Comprehensive warehouse management

MAM's WMS module provides extensive functionality from goods receiving and putaway to picking, packing and shipment

Key features

- ▶ Optimize warehouse goods flow
- ▶ Increase traceability and accuracy
- ▶ Fully integrated wireless PDA
- ▶ Dashboard with status & audit reports
- ▶ Goods receiving and putaway
- ▶ Inventory inquiries by product or location
- ▶ Inventory movements and adjustments
- ▶ Inventory taking and replenishment
- ▶ Picking, packing and despatch
- ▶ Carrier integration options

MAM's Warehouse Management Software (WMS) module provides a real time inventory management solution to warehouses of all sizes. Integrating seamlessly with MAM's Autopart business management application, the WMS module will optimize the flow of goods through a warehouse, managing all activities from goods receiving and putaway to picking, packing and shipment. The WMS module incorporates a hand-held PDA and scanner that handles all data input and communicates wirelessly with the main software application, where an intuitive dashboard provides an instant snapshot of current activities.
